FACTSHEET FEBRUARY 2026

OLD BRIDGE FLEXI CAP FUND*

(An open ended dynamic equity scheme investing across large cap, mid cap, small cap stocks)

INVEST NOW

*For riskometer please refer to the last page

Mutual Fund investments are subject to market risks, read all scheme related documents carefully.

THE STORY BEHIND OLD BRIDGE

In ancient Rome, when a bridge was constructed, the engineers of the bridge had to stand underneath it when the scaffolding came off. With their lives at risk, the engineers left no room for error. To design for safety and longevity, the engineers ensured that the load carrying capacity of the bridge was much higher than the actual or expected loads. They thus built a higher margin of safety into their construction.

Our **portfolio** construction echoes a similar principle. Our priorities are to buy enduring business models with emphasis on limiting capital losses, which is why we give emphasis on buying at the right price and value. By doing this, a margin of safety is built in to protect our portfolios even if our estimates are on the wrong side.

www.oldbridgemf.com

INVESTMENT PROCESS

We focus on companies that show potential to be dominant in their industry. We like to be early in that transition.

WHAT WE LOOK FOR

Monopolistic/ Consolidators of the Industry

- Preference for consolidating businesses
- Companies gaining market share with no change in capital employed
- Companies with lowest cost in their industry
- Leaders at the end of consolidating cycle usually end up with higher market share and pricing power

Low Financial Leverage

- Companies with negligible debt
- Businesses leveraging into an economic up-cycle & deleveraging at the top of the cycle

Capital Efficient Business

- Companies that migrate upwards from a low RoE
- Look for capital employed to be controlled
- Cash flow positive nature of the business with low gearing

Low Valuation

- "Out of favour" businesses where current value of the stock reflects its depressed earnings
- EV / Sales
- Market Cap / Cash Profit (Flows)

INVESTMENT PHILOSOPHY

We concentrate on identifying businesses early into a cycle. The underlying companies in the portfolio would demonstrate leadership skills and have financial discipline. The endeavour would be to look for companies in industries that are consolidating.

OLD BRIDGE STRATEGY

We are stock pickers, our strategy revolves around a buy and hold. We intend to invest in mid markets and maintain a healthy margin of safety in all what we do. Our portfolio would consists of a few names, ~25 businesses. The underlying companies in the portfolio would meet the criteria of capital efficiency, low leverage and low valuation.*

Corporate Cycle

All Industry participants are profitable, fragmentation of industry

How investors react to it

Investors ignore all warnings, extrapolate the past
Over ownership of businesses

HOW TO READ A

MUTUAL FUND FACTSHEET?

Fund Manager: An employee of the asset management company such as mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

Application amount for Fresh Subscription: This is the minimum investment amount for a new investor in a mutual fund scheme.

Minimum Additional Amount: This is the minimum investment amount for an existing investor in a mutual fund scheme.

SIP: SIP or systematic investment plan works on the principle of making period investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests Rs 500 every 15th of the month in an equity fund for the period of three years.

NAV: Net asset value or NAV is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day and it is the value at which investors enter or exit the mutual fund.

Benchmark: A group of securities, usually a market index, whose performance is used as a standard or benchmark to assess the performance of mutual funds and other investments. Some typical benchmarks include the Nifty, Sensex, BSE 200, BSE 500, and 10-year Gsec.

Entry Load: A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry Load is charged at the time and investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance if the NAV is ₹ 100 and the entry load is 1%, the investor will enter the fund at ₹ 101.

Note: SEBI Master Circular for Mutual Funds dated June 27, 2024 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the service rendered by the distributor.

Exit load: Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is deducted from the prevailing NAV at the time of redemption. For instance if the NAV is ₹ 100 and the exit load is 1%, then the redemption price would be ₹ 99 per unit.

Standard deviation: Standard deviation is statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Sharpe Ratio: The Sharpe Ratio named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta: Beta is a measure of an investment's volatility vis-à-vis the market. A beta of greater than 1 implies that the security's price will be more volatile than the market. Beta of less than 1 means that the security will be less volatile than the market.

AUM: Assets under management or AUM refers to the recent / updated cumulative market value of investments managed by Mutual fund or any investment firm.

Holdings: The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme: The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

IDCW: Income Distribution cum Capital Withdrawal option or IDCW can be distributed out of investors' capital (Equalization Reserve), which is part of the sale price that represents realized gains.

P/E Ratio: The price-earnings ratio (P/E Ratio) is the relation between a company's share price and earnings per share (EPS). It denotes what the market is willing to pay for a company's profits.

P/BV: The price-to-book ratio compares a company's market value to its book value. The market value of a company is its share price multiplied by the number of outstanding shares.

IDCW Yield: The dividend yield is a financial ratio that shows how much a company pays out in dividends each year relative to its stock price.

OLD BRIDGE FOCUSED FUND[^]

(An Open-ended Equity Scheme investing in maximum 30 stocks) (Multi Cap)
